PointMax I/O System Specifications

Bulletin 5034

Rockwell Automation recognizes that some of the terms that are currently used in our industry and in this publication are not in alignment with the movement toward inclusive language in technology. We are proactively collaborating with industry peers to find alternatives to such terms and making changes to our products and content. Please excuse the use of such terms in our content while we implement these changes.

Catalog Numbers

This publication is applicable to these modules and accessories:

EtherNet/IP Adapter	5034-AENTR, 5034-AENTRXT
Mounting Base	5034-MB, 5034-MBXT, 5034-MBSA, 5034-MBSAXT
Digital I/O Module	5034-IB16, 5034-IB16XT, 5034-IB8, 5034-IB8XT, 5034-OB16, 5034-OB16XT, 5034-OB8, 5034-OB8XT, 5034-OW4I, 5034-OW4IXT
Safety Digital I/O Module	5034-IB8S, 5034-IB8SXT, 5034-OB8S, 5034-OB8SXT
Analog I/O Module	5034-IF8C, 5034-IF8CXT, 5034-IF8V, 5034-IF8VXT, 5034-IF4, 5034-IF4XT, 5034-IRT4I, 5034-IRT4IXT, 5034-OF4, 5034-OF4XT
Specialty I/O Module	5034-IOL4, 5034-IOL4XT
Expansion Power	5034-EXP, 5034-EXPXT
Potential Terminal Module	5034-MBPTM, 5034-MBPTMXT
Removable Terminal Block for Modules	5034-RTB18, 5034-RTB18S, 5034-RTB24S, 5034-RTBT, 5034-RTBTS

Terminology

This table defines the terms that are used in this publication.

Table 1. Terminology

Acronym	Full Term	Definition
BP	Backplane Power	Power that is generated from module power by the adapter and expansion power, and supplied to the I/O system through the backplane.
CIP™	Common Industrial Protocol	An industrial communication protocol that is used by Logix 5000® based automation systems on EtherNet/IP™, ControlNet®, and DeviceNet® communication networks.
CIP Sync™	Common Industrial Protocol Synchronization	CIP Sync provides the increased control coordination needed for control applications where absolute time synchronization is vital to achieve real-time synchronization between distributed intelligent devices and systems.
CJC	Cold Junction Compensator	A device that is used in thermocouple measurements to help obtain accurate temperature readings at the hot junction.
HART	Highway Addressable Remote Transducer	A protocol that enables both analog and digital communication over the same wiring, including device diagnostic and status information.
MB	Mounting Base	A device that provides data and power connections from the backplane to the installed module.
MP	Module Power	Power that is supplied to the adapter and expansion power.
MSB	Most Significant Bit	The bit that has the largest value in a multi-bit binary number.
ODVA	Open DeviceNet Vendor Association	A nonprofit association of vendors that are established for the promotion of CIP networks.
PL	Performance Level	ISO 13849-1 safety rating
RIUP	Removal and Insertion Under Power	A feature that enables the device to be connected and disconnected from the system without having to remove power from the system.
RPI	Requested Packet Interval	Time interval (usually in milliseconds) that users are requesting their data be exchanged at
RTB	Removable Terminal Block	A component that is used for wiring field devices to.
RTD	Resistance Temperature Detector	A type of sensor whose resistances change as its temperature changes.
SA	Sensor Actuator	A term that is used to describe field-side devices.
SELV	Safety Extra Low Voltage	An electrical system where the voltage level is considered safe under normal or fault conditions, as defined in the EN and IEC standards.
SIO	Standard Input/Output	Describes the function of a port on an IO-Link master device.
SSV	Sensor Source Voltage	Voltage that is supplied to a sensor.
XT	Harsh Environment	These modules have additional conformal coating and design considerations that add a greater degree of protection when exposed to harsh, corrosive environments.
VCL	Voltage Clamp Low	The low threshold for limiting the voltage level.

Components and Accessories Compatibility

The following table lists the I/O modules and which MB, RTB, and color markers they are compatible with.

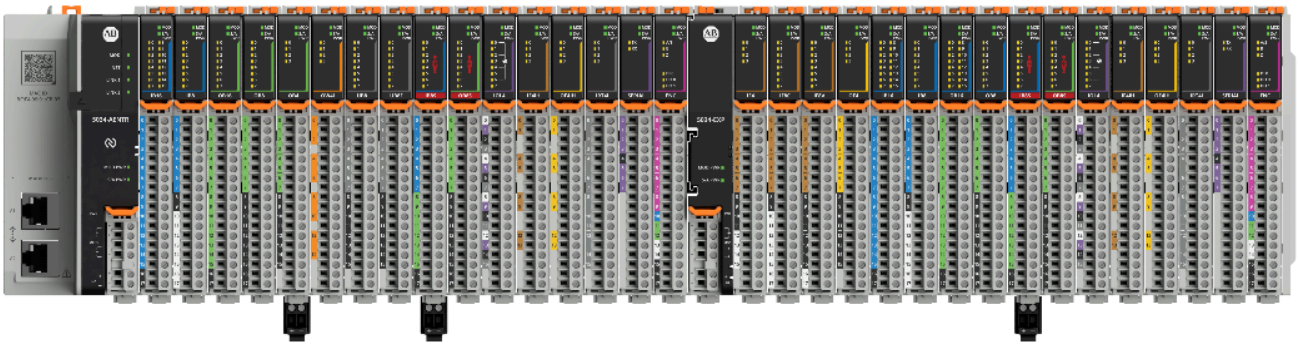
PointMax I/O System Overview

Figure 1. PointMax I/O System



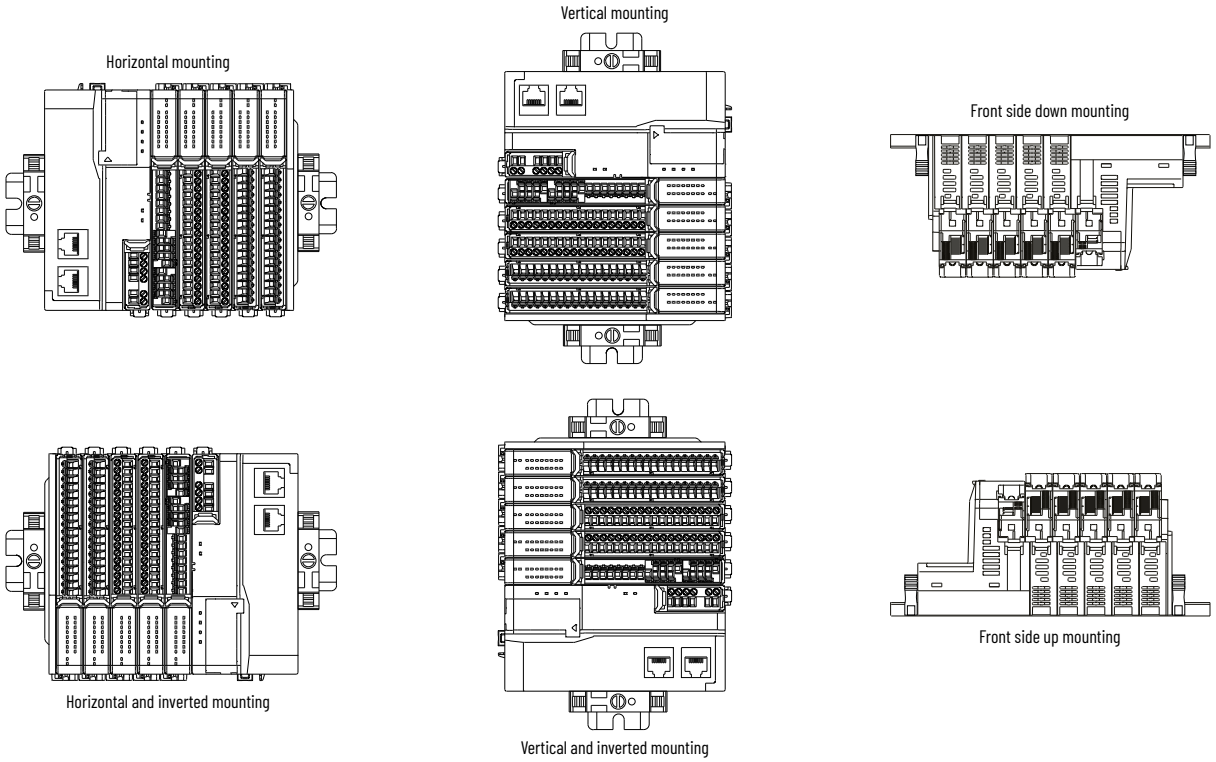
The PointMax™ I/O architecture provides a wide range of input and output modules to span many applications, such as machine, hybrid, and process control. The architecture uses Producer/Consumer technology that allows input information and output status to be shared among multiple Logix 5000 controllers. PointMax I/O systems are used as remote I/O modules with Logix 5000 controllers. You configure the modules with the Studio 5000 Logix Designer® application.

A PointMax I/O system consists of one EtherNet/IP adapter and supports up to 32 I/O modules. A 5034-EXP or 5034-EXPXT expansion power is required when using more than 16 I/O modules. The I/O modules are mounted on an MB and require an RTB to connect field-side wiring. You must purchase an MB and an RTB individually for each I/O module.

The PointMax I/O system is mounted onto a zinc-plated chromate-passivated steel DIN rail such as the Allen-Bradley® 199-DR1; 46277-4; EN 60715 – 35 x 7.5 mm (1.38 x 0.30 in.). You must also install DIN rail end anchors (Allen-Bradley 1492-EAJ35 or 1492-EAHJ35) at both ends of your system for vibration or shock environments.

The PointMax I/O system can be oriented in the following positions.

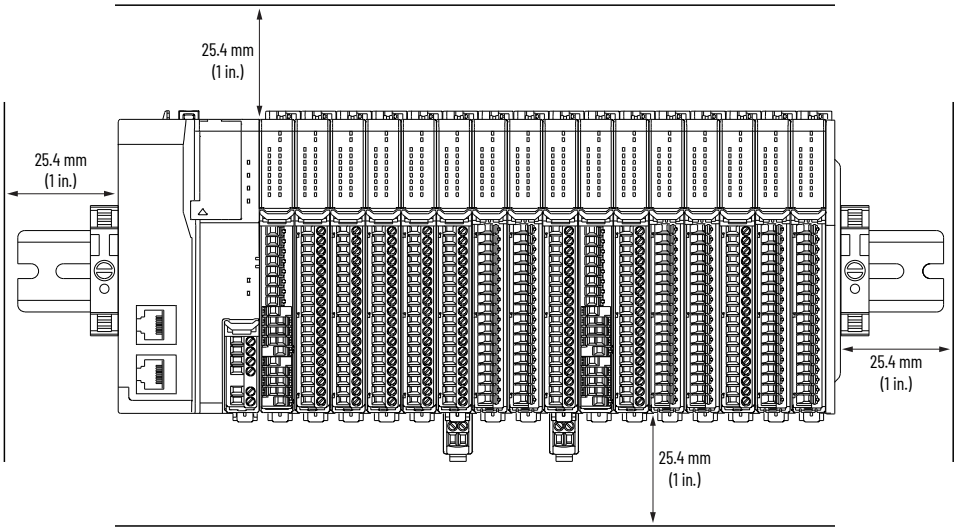
Figure 2. PointMax I/O System Mounting Orientations



Spacing

Maintain spacing from enclosure walls, wireways, and adjacent equipment. Allow 25.4 mm (1 in.) of space on all sides for adequate ventilation.

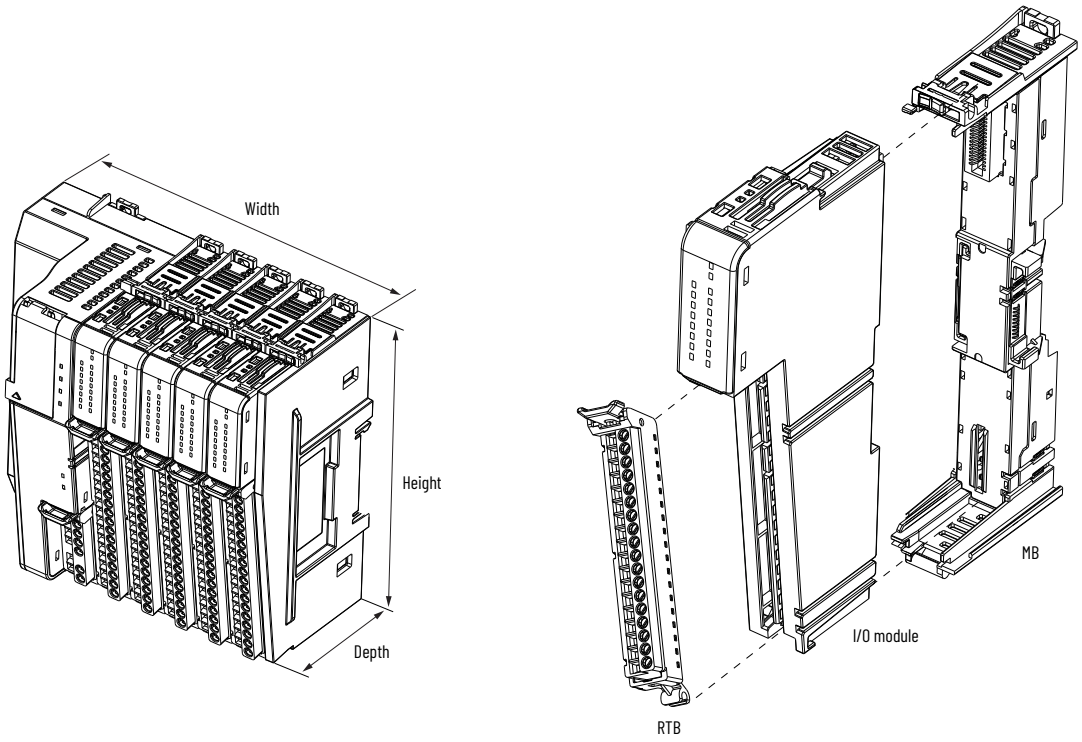
Figure 3. Spacing Example



Dimensions

The dimension measurements that are provided in this publication are based on the horizontal mounting orientation.

Figure 4. Dimension Example



An I/O module, MB, and RTB are required to fill a slot in the chassis.

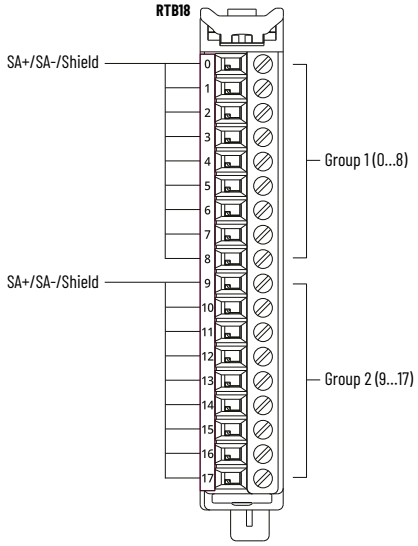
Figure 40. 5034-MBPTM and 5034-MBPTMXT Wiring Diagram



- You can install only one 5034-MBPTM or 5034-MBPTMXT to the right of each I/O module.
  - For 5034-IB16 and 5034-IB16XT only – You can install two consecutive 5034-MBPTM or 5034-MBPTMXT to the right of the module for 3-wire sensor applications.
- All nine terminals in each group are shorted.
- Each group can be connected to either SA+, SA-, or shield terminals from an external source.
- In each group, one terminal serves as the feeder and the other eight terminals function as outputs.

	5034-RTB18, 5034-RTB18S	Removable terminal block 18-terminals (screw-type and push-in spring-type)
	5034-RTB24S	Removable terminal block 24-terminals (push-in spring-type)
	5034-RTBT, 5034-RTBTS	Removable terminal block with CJC 18-terminals (screw-type and push-in-spring-type)

Environmental specifications and certifications for PointMax removable terminal blocks are provided in Environmental Specifications on page 90.

5034-RTB2 and 5034-RTB2S Removable Terminal Blocks

Use these RTBs with the 5034-MBSA and 5034-MBSAXT mounting bases. These catalogs are not available for purchase individually. They can only be ordered in a pack of 5 (5034-RTB2-QTY5 or RTB2S-QTY5).

Wiring Specifications for Removable Terminal Blocks

These wiring specifications apply to all PointMax removable terminal blocks – 5034-RTB2, 5034-RTB2S, 5034-RTB6, 5034-RTB6S, 5034-RTB18, 5034-RTB18S, 5034-RTB24S, 5034-RTBT, 5034-RTBTS.

Wire conductor and insulation rating must support a minimum temperature rating of 105 °C (221 °F). The tightening torque value for screw-type RTBs is 0.22…0.25 N•m (1.95…2.21 lb•in.).

5034-AENRTB-QTY5 and 5034-AENRTBS-QTY5 RTB for EtherNet/IP Adapter and Expansion Power

Use these catalog numbers to order additional screw-type (5034-RTB6) or push-in spring-type (5034-RTB6S) RTBs for use with the 5034-AENTR and 5034-AENTRXT EtherNet/IP adapters, and 5034-EXP and 5034-EXPXT expansion power. Each RTB is available in a pack of five units.

For specifications, see 5034-RTB6 and 5034-RTB6S Removable Terminal Blocks on page 86.

5034-RTB2-QTY5 and 5034-RTB2S-QTY5 RTB for MBSA Mounting Base

Use these catalog numbers to order additional screw-type (5034-RTB2) or push-in spring-type (5034-RTB2S) RTBs for use with the 5034-MBSA and 5034-MBSAXT mounting bases. Each RTB is available in a pack of five units.

For specifications, see 5034-RTB2 and 5034-RTB2S Removable Terminal Blocks on page 85.

5034-ECR-QTY5 End Cap

Use this catalog number to order additional end caps. Install an end cap to cover the exposed interconnections on the adapter or the last mounting base on the DIN rail. The end cap is available in a pack of five units.
